Dear Mr. Commissioner: I have become aware of the proposal to limit the broadcast of local information from satellite radio (HR4026).

I ask that you please consider and approve the capability for satellite radio providers to offer these local services to consumers, such as myself.

I am interested in obtaining additional information & services from these innovative providers. I am especially interested in traffic information. I commute & drive approx. 35,000 miles/year and this capability saves time, reduces traffic congestion, reduces exhaust emissions and saves fuel (in Michigan it is well over \$2/gallon).

I am interested and appreciate new & innovative products & services that improve my productivity & life - such as cellular telephone's voice & data services, broadband cable, TiVO personal recorders, OnStar driving & safety related services and XM Satellite radio. On many of these products, I have also been able to show the benefits to my 3 brothers & their wives as well as my parents.

Please continue to allow innovative services, such as XM & Sirius satellite radio services to continue to grow & expand their products & services to offer consumers like me more choices, more competitive rates and a more competitive ventures that can be exported to other countries.

Thank you for allowing my input to be considered,  
Duane Paige
